SEC P vs NP — Wall atlas

Compiled 2026-04-27 13:17 UTC. 17 total barrier rejections logged.

This is the **map of known walls** encountered by the barrier filter. Each entry below was a proposed conjecture that, according to dual-LLM agreement, would fall to one of the four classical barriers. Patterns in this data tell us where the proposer keeps tripping.

Barrier-hit counts

Barrier	Rejections
`RELATIVIZATION`	7
`ALGEBRIZATION`	4
`KARP_LIPTON`	3
`NATURAL_PROOFS`	3

Rejections by field_A (top 10)

field_A	total	primary barrier
Abstract recursion theory	4	`RELATIVIZATION`
Boolean function analysis	4	`RELATIVIZATION`
Arithmetic interactive proofs	4	`ALGEBRIZATION`
Meta-complexity	3	`KARP_LIPTON`
Abstract recursion	1	`RELATIVIZATION`
Schur-Horn majorization theory (doubly-stochastic / diagonal	1	`NATURAL_PROOFS`

Recent rejections (last 15)

- [2026-04-24 16:19 UTC] `RELATIVIZATION` (conf 0.90) — Truth-table discriminant for circuit hardness
- [2026-04-24 16:21 UTC] `ALGEBRIZATION` (conf 0.95) — Sum-check bound for NEXP lower bound
- [2026-04-24 16:23 UTC] `KARP_LIPTON` (conf 0.99) — Every NEXP language has polynomial-size circuits
- [2026-04-24 16:37 UTC] `RELATIVIZATION` (conf 0.95) — Diagonalization separation of P and NP
- [2026-04-24 16:39 UTC] `NATURAL_PROOFS` (conf 0.95) — Truth-table discriminant for circuit hardness
- [2026-04-24 16:41 UTC] `ALGEBRIZATION` (conf 0.95) — Sum-check bound for NEXP lower bound
- [2026-04-24 20:48 UTC] `RELATIVIZATION` (conf 0.99) — Diagonalization separation of P and NP

- [2026-04-24 20:48 UTC] `RELATIVIZATION` (conf 0.90) — Truth-table discriminant for circuit hardness
- [2026-04-24 20:49 UTC] `ALGEBRIZATION` (conf 0.95) — Sum-check bound for NEXP lower bound
- [2026-04-24 20:51 UTC] `KARP_LIPTON` (conf 0.95) — Every NEXP language has polynomial-size circuits
- [2026-04-24 21:00 UTC] `RELATIVIZATION` (conf 0.95) — Diagonalization separation of P and NP
- [2026-04-24 21:01 UTC] `NATURAL_PROOFS` (conf 0.95) — Truth-table discriminant for circuit hardness
- [2026-04-24 21:05 UTC] `ALGEBRIZATION` (conf 0.95) — Sum-check bound for NEXP lower bound
- [2026-04-24 21:07 UTC] `KARP_LIPTON` (conf 0.99) — Every NEXP language has polynomial-size circuits
- [2026-04-26 22:22 UTC] `NATURAL_PROOFS` (conf 0.70) — Schur-Horn Majorization Gap Lower-Bounds Sign-Rank Discrepancy
