## SEC P vs NP — Wall atlas

Compiled 2026-05-19 02:40 UTC. 36 total barrier rejections logged.

This is the **map of known walls** encountered by the barrier filter. Each entry below was a proposed conjecture that, according to dual-LLM agreement, would fall to one of the four classical barriers. Patterns in this data tell us where the proposer keeps tripping.

### Barrier-hit counts

| Barrier        | Rejections |
|----------------|------------|
| ALGEBRIZATION  | 13         |
| NATURAL_PROOFS | 13         |
| RELATIVIZATION | 7          |
| KARP_LIPTON    | 3          |

### Rejections by field\_A (top 10)

| field_A                                                               | total | primary barrier |
|-----------------------------------------------------------------------|-------|-----------------|
| Abstract recursion theory                                             | 4     | RELATIVIZATION  |
| Boolean function analysis                                             | 4     | RELATIVIZATION  |
| Arithmetic interactive proofs                                         | 4     | ALGEBRIZATION   |
| Meta-complexity                                                       | 3     | KARP_LIPTON     |
| {“framework_name”:<br>“Tropical Circuit Weight<br>Analysis (TCWA)”    | 2     | ALGEBRIZATION   |
| Representation Theory of<br>Symmetric Groups                          | 2     | ALGEBRIZATION   |
| Abstract recursion                                                    | 1     | RELATIVIZATION  |
| Schur-Horn majorization<br>theory (doubly-stochastic<br>/ diagonal    | 1     | NATURAL_PROOFS  |
| Quantile statistics of<br>random subcube<br>restrictions (order-st    | 1     | NATURAL_PROOFS  |
| Coarse Geometric<br>Karchmer-Wigderson<br>(CG-KW); coarse<br>geometry | 1     | NATURAL_PROOFS  |
